

WiFi Fortress - Admin Guide

Installation on Linux (.deb)

```
```bash
```

```
sudo dpkg -i wifi-fortress_1.0.0_all.deb
```

```
```
```

Installation on Windows (.exe)

Run the installer and follow on-screen instructions.

CI/CD with GitHub Actions

- Uses `python-app.yml` in `.github/workflows/`
- Auto-tests and packages project on push

Module Management

- Drop custom attack modules in `core/plugins/`
- Dynamic loader picks up new Python classes with `run()` method

Updating

Re-download the latest `.deb` or `.exe` from GitHub Releases or build locally:

```
```bash
```

```
dpkg-deb --build wifi-fortress/
```

```
```
```
